IMPLEMENTS OF QUALITY

**The New
COCKSHUTT
14-ft. Disc Harrow**

The old reliable Cockshutt quality plus the latest improvements

The Cockshutt 14-foot Disc Harrow will save you time and much labor

For Better Seed Bed

Thorough discing will do much to assure the success of your crop for it increases the moisture capacity of the soil and prepares a better seed bed. The sharp disc blades cut the hard clods and the old roots, pulverize the soil and create the most favourable conditions for planting. Time and effort spent in preparation of the seed bed represent a sound investment from which you may expect substantial returns in the way of an increased crop. To be sure of obtaining the maximum of efficiency use a "Cockshutt" Disc Harrow.

For Large Acreage

For large acreage, particularly when the season is short and time is an important factor, or for summer fallowing, you cannot afford to overlook the advantages to be gained from the use of this implement. Here it is that it makes its contribution to your labor problem. With its wide sweep of 14 feet (double the width of the ordinary harrow) it quickly covers the ground and leaves it in splendid condition—one man being able to do twice the work that could be accomplished with the ordinary harrow.

Its New Features

In this implement the centre disc attachment has been replaced by a stiff centre tooth of exceptional strength which effectively cultivates the strip left uncut when the rear gangs are angled. It can be set for depth of cut, and is automatically raised when the sections are straightened out for transportation.

The number of control levers has been reduced to two, thus making for simplicity of adjustment—always a desirable feature—and both are convenient to the driver and readily operated. The need of getting down to make necessary adjustments is thereby eliminated, resulting in increased efficiency and a saving of time.

Substantially Built

Strength of construction, one of the primary requisites of a good harrow, is perhaps the outstanding feature of the Cockshutt. Built throughout of high carbon steel, it is securely braced at every essential point. The gangs of discs are connected and firmly held in place by heavy "T" angle frames. Its rugged strength fits it for the hardest usage.

High-Grade Bearings

The lightest possible draft and the longest possible service are ensured by the use of high-grade ball bearings on which the gangs of discs turn. These bearings are found at the ends of the frame, and the boxings in which they are placed exclude all dust and grit. Provision is made for thorough lubrication so the wear and tear that would otherwise be caused by friction is thus overcome. The result is longer life for the harrow and lighter work for the horses.

Scraper Efficiency

The scraper arrangement used on the Cockshutt Harrow is the simplest and most efficient on the market. Made entirely of steel, all parts are securely rivetted together. Any tendency for the earth to clog the discs is removed and they are kept clean and efficient. Convenient levers hold the scrapers at work or away from the blades, as desired.

The Forecarriage

Another feature deserving special mention is the forecarriage. Wheels are generous in size and substantially built. They make for light draft and easy running, since their size prevents them from dropping into all small holes.

The regular equipment of the Cockshutt 14-foot Harrow includes six-horse steel eveners. These are much stronger and more durable than wooden ones.

Better Preparation Brings Bigger Returns

Experience Counts!

OURS enables us to turn out a harrow unsurpassed on the market—**YOURS** (if you use a Cockshutt) will convince you of the truth of our claims. Built by practical men, this harrow represents years of expert knowledge. The reputation attained in the past will be fully sustained in this implement. If efficiency in operation, strength of construction and convenience in use are what you desire in a harrow you cannot do better than invest in a Cockshutt.

A Good Harvest is largely the result of thorough Preparation. Do your share by using Cockshutt Farm Implements!
